

THE IBSSP PARALLAX.

An approach based on time-cycles.

1. Empirical layer: Research
2. Predictive layer: Analysis
3. Integrative layer: Synthesis

Parallax: the observed change due to a shift in perspective.

1. Grounded on inductive reasoning; perspectives shift from strategy to structure: rules emerge from data.
2. Grounded in deductive reasoning; perspectives shift from structure to strategy: rules apply to data.

The apparent contradiction arises because both claim explanatory priority, but at different interplay distances.

Where the antinomy comes from?

-the conflict isn't logical, it's positional.

What must already be true for induction and deduction to function as reasoning?

-rules defined by observation, not the observer.

3. An indicative paradox:

-research operates ex post (what happened).

-analysis operates ex ante (what should follow).

The IBSSP Star Rating, IBSSP PPF Model and IBSSP Time Factor, are operating in the present on basis of an inverted/reverted parallax.
